Michael Gildenhuys Butoi

Information Systems Graduate · Agri Tech & Data

PROFILE

BIT Honours in Information Systems, University of Pretoria (completing November 2026, 73% average), after a BIT degree passed **with distinction** and a capstone project that **won the overall prize (94%)**. Applies this to farming through paid dairy farm work and public farm software. Seeking a junior software or data role in Agri Tech from 2027, willing to relocate.

EDUCATION

BIT Honours, Information Systems · University of Pretoria — **Jan – Nov 2026 (expected)**
Average 73% · distinctions: **Human-Computer Interaction 83%**, **Systems Development 75%**
Research: *The Paradox of Transparency: Explainable AI, Cognitive Load and Trust in Smart Grids* (supervisor: Dr Neetu Ramsaroop). Review of 49 studies plus interviews with 5 energy experts.

BIT, Information Systems · University of Pretoria — **Feb 2023 – Nov 2025**
Passed with distinction (conferred May 2026) · average 75%, final year 81%, **capstone 94%**

National Senior Certificate · Nico Malan High School · Prefect — **2018 – 2022**

EXPERIENCE

AI Dashboard Project — **2026**
Dairy farm, Tsitsikamma · paid project, 6.5 days

- Built a custom farm dashboard with AI tools, kept simple for non-technical managers, who can change or extend it themselves by describing what they want in plain language.
- Connected an AI assistant to the farm's Dropbox and Google Sheets to compile messy files into one dashboard, refreshing every Monday at 06:00.
- Covered income, expenses, feed and herd data. Showed that feed demand exceeded grass growth, guiding culling and feed purchases. Management said it clearly showed where they were losing money.

AI Consulting Session — **2026**
EC Contracting (commercial farming business) · paid session, 3 hours

- Showed the business how AI can bring its operational data into one clear view; they paid for the session.

Farm Worker & IT Support — **2023 – 2026**
Dairy farm, Tsitsikamma, South Africa · about 3 months in total

- Did practical farm work: pipe work, herding cows, basic construction (moving and pouring concrete) and collecting supplies for workers by pickup truck.
- Built an Excel milk-yield tracker (with AI assistance, 2024); mounted a security camera at the feed store.

PROJECTS

TAPS – The Aardklop Pronk System (INF 370 Capstone) — **2025**
Team of five · client: Stage Alive Production House · .NET Web API, SQL Server, TypeScript, Azure

- Built a youth theatre festival platform: sign-ups, adjudication, production details, blockchain certificates.
- Overall winners of the 2025 INF 370 Capstone, plus four team awards including Best Project in Informatics 370.

Farm software on GitHub (michaelbutoi.github.io) — **2026**

- Milk Yield Tracker (C#, .NET, SQL Server, 25 tests) and Feed vs Grass Calculator (TypeScript, live demo). I set the problems and rules; AI wrote most of the code, which I reviewed and tested.

SKILLS & ADDITIONAL INFORMATION

Technical	C#, TypeScript, SQL, .NET Web API, Azure, SQL Server, Excel, database admin
AI tools	AI assistants and agents (data connectors, project setup, scheduled automation), ChatGPT
Languages	English and Afrikaans (both fluent)
Other	SA citizen, valid passport, willing to relocate (work visa required). Driver's licence.
